

CS 2212A Group Project – Team Contract

Fall 2024

Team 21

This team contract serves as the guidelines and rules to help the project team work productively together over the course of the project. The team contract may be updated if the need arises throughout the project. Any updates will be discussed with the project team members.

Team members:

Name	Email
1. Mike Tran	mtran286@uwo.ca
2. Devan Singh Sodhi	dsodhi3@uwo.ca
3. James Hao Han Song	jsong473@uwo.ca
4. Keefe Feng	kfeng62@uwo.ca
5. Piercen Di Berardo	pdibera@uwo.ca

1. Meeting Times:

When there is not a quiz?

Wednesday, 3:30 – 4:30 PM | Middlesex College

When is there a quiz?

Monday, 4:30 – 5:30 PM | Middlesex College

Meeting length?

Meetings will almost always be an hour in length, on some rare occasions meetings can extend indefinitely. In cases where meetings are extended, members are permitted to leave early, given they have prior plans, although it is not recommended.

2. Work Norms:

Expected hours to work on the project each week?

The number of hours each member is expected to work is determined weekly. The time allocated to the project should be evenly divided between members, while also considering everyone's schedule. Given the nature of everyone's fluctuating schedules we will assign each other tasks with completion times that are within each member's capability for that week.

How will team deadlines be set?

Team deadlines will be set on a meeting-by-meeting basis. Each member should work on small, well-defined tasks, established in the prior meeting. Their work will be evaluated in the next meeting by all present team members.

How will the work be reviewed by other team members?

Each member is required to document their own work/progression. This documentation will be briefly reviewed by the rest of the team each time we meet.

What happens if people have different opinions about a task or project component?

In circumstances in which two or more groupmates are not in accordance, they are required to come to a consensus. This is in opposition to voting or giving one member final say. No one member's opinion should be of higher priority than another's.

3. Work Division:

At a high level how will work be divided among the group members (you will likely have to revisit this as your project evolves)?

This will be decided as our project develops. As a temporary solution, we will assign tasks based on each individual member's strong suit. As an example, if one member specifically excels at creating art, they may have a larger responsibility of the games UI elements.
